

TABLES

2.1	Mathematical notation used in this book.	15
6.1	Operation counts for point-to-triangle distance calculation using the interior-to-edge approach.	206
6.2	Operation counts for point-to-triangle distance calculation using the edge-to-interior approach.	211
9.1	Various relationships for Platonic solids.	347
11.1	The six possible configurations of three planes can be distinguished by testing vector algebraic conditions.	533
11.2	Parametric representation of the canonical simple ruled quadrics. After Dupont, Lazard, and Petitjean (2001).	599
11.3	Parametric representation of the projective quadrics. After Dupont, Lazard, and Petitjean (2001).	600
11.4	Conditions under which natural quadric surfaces intersect in planar conic curves. After Miller and Goldman (1995).	603
11.5	Coefficients for the separating axis test	626
12.1	Formula for ϕ .	667
12.2	Formula for θ .	668
13.1	The tags for edge-line intersections are o , i , m , and p . The table is used to update the current tag at a point of intersection. The old tag is located in the row, the update tag for the current edge intersection is located in the column, and the new tag for the point of intersection is the corresponding entry in that row and column.	705
A.1	Comparison of memory usage.	862
A.2	Comparison of operation counts for converting between representations of rotations.	864
A.3	Comparison of operation counts for transforming one vector.	865
A.4	Comparison of operation counts for transforming n vectors.	866
A.5	Comparison of operation counts for composition.	866
A.6	Operation counts for quaternion interpolation.	867
A.7	Operation counts for rotation matrix interpolation.	869
A.8	Signs of the Sturm polynomials for $t^3 + 3t^2 - 1$ at various t values.	873
A.9	Signs of the Sturm polynomials for $(t - 1)^3$ at various t values.	873

A.10	Second partials of $f(x, y) = 2y^2x - yx^2 + 4xy$ at critical points.	910
B.1	Trigonometric function values for some commonly used angles.	929
B.2	Domains and ranges of trigonometric functions.	931
B.3	Domains and ranges of inverse trigonometric functions.	946
