This brief note describes the 5 Platonic solids and lists specific vertex values and face connectivity indices that allow you to build triangle or polygon meshes of the solids. In each of the sections the following notation is used.

v number of vertices	A	dihedral angle	between ac	ljacent face	es
----------------------	---	----------------	------------	--------------	----

$$R$$
 radius of circumscribed sphere

$$f$$
 number of faces  $r$  radius of inscribed sphere

$$p$$
 number of edges per face  $L$  edge length

$$q$$
 number of edges sharing a vertex  $S$  surface area

V volume

The following are identities for the polyhedra.

$$\sin(A/2) = \frac{\cos\left(\frac{\pi}{q}\right)}{\sin\left(\frac{\pi}{p}\right)}, \quad \frac{S}{L^2} = \frac{fp\cot\left(\frac{\pi}{p}\right)}{4}, \quad V = \frac{rS}{3},$$

$$\frac{R}{L} = \frac{\tan\left(\frac{\pi}{q}\right)\tan\left(\frac{A}{2}\right)}{2}, \quad \frac{r}{L} = \frac{\cot\left(\frac{\pi}{p}\right)\tan\left(\frac{A}{2}\right)}{2}, \quad \frac{R}{r} = \tan\left(\frac{\pi}{p}\right)\tan\left(\frac{\pi}{q}\right)$$
